

Workplace Implications of Post-Vaccination Side Effects Checklist

Montefiore Associates with post-vaccination symptoms can work if ALL the following conditions are met!

**Symptoms started within 3 days of the vaccine
(Day 1 = Day of Vaccine)**

They are afebrile (fever defined as 100.0F+). Associates can return if a COVID test is negative and they are fever free for 24 hours. If the fever is after dose 2, testing is recommended but not required.

They only have symptoms that can be classically attributed to the vaccine (chills, fatigue, muscle pain/body aches, headache):

They feel well enough to work

Symptoms are present for less than 2 days

Anyone who has potential COVID-19 symptoms other than: fever, chills, fatigue, muscle pain/body aches, and headache **follows usual OHS protocols.** Associates with symptoms that do not meet criteria to work or anyone wanting to discuss their post-vaccine symptoms, should call **OHS at 718-920-5406 Option 2 M-F 8AM-6PM, Sat/Sun 8AM-4PM**
